I. TECHNICAL DATA

TRACK SYSTEM	4 track 2 channel stereo/monaural system
REEL CAPACITY	Up to 10-1/2" reel
TAPE SPEED	19 cm/s ± 0.8% (7-1/2 ips.) 9.5 cm/s ± 1.0% (3-3/4 ips.) (Pitch control : ±6%) AAL Model Only
WOW & FLUTTER	Less than 0.03% WRMS, 0.08% DIN 45500 at 19 cm/s Less than 0.04% WRMS, 0.10% DIN 45500 at 9.5 cm/s
FREQUENCY RESPONSE	30 to 26,000 Hz ± 3 dB at 19 cm/s (WR Tape) 30 to 19,000 Hz ± 3 dB at 9.5 cm/s (WR Tape)
DISTORTION	Less than 0.5% (at 1,000 Hz 0VU)
SIGNAL TO NOISE RATIO	Better than 62 dB DIN 45500 at 19 cm/s
ERASE RATIO	Better than 70 dB (at 1,000 Hz)
CROSS TALK	Better than 40 dB (at 1,000 Hz)
CHANNEL SEPARATION	Better than 55 dB (at 1,000 Hz)
BIAS FREQUENCY	100 kHz
HEADS	(3): One GX recording head, One GX playback head One erase head
MOTORS	(3): One AC servo motor for capstan drive Two AC eddy current motors for reel drive
FF. & RWD. Time	120 sec. using 550 m (1,800 ft.) Tape
OUTPUT JACKS	Line (2): 0.775 V (0VU) Required load impedance: more than 20 kohms Phone (1): 100 mV/8 ohms
INPUT JACKS	Microphone (2): 0.25 mV Required microphone impedance: 600 ohms Line (2): 70 mV Input impedance 100 kohms
DIN JACK	Input: 2.0 mV Input impedance 10 kohms Output: 0.3 V
DIMENSIONS	440(W) x 446(H) x 241(D) mm (17.4 x 17.6 x 9.5")
WEIGHT	17.6 kg (38.9 lbs)
POWER REQUIREMENT	120V, 60 Hz for USA & Canada 220/240V switchable, 50 Hz for European countries & Australia 110/120/220/240V, 50/60 Hz switchable for other countries
POWER CONSUMPTION	120W

* For improvement purposes, specifications and design are subject to change without notice.

II. DISMANTLING OF UNIT

In case of trouble, etc. necessitating dismantling, please dismantle in the order shown in the photographs. Reassemble in reverse order.

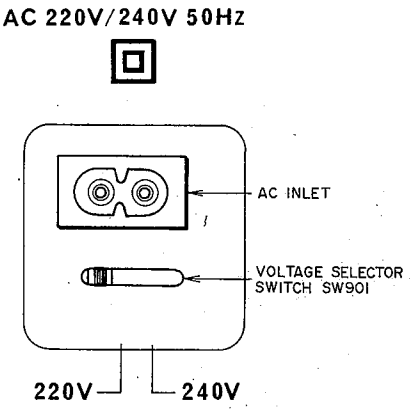
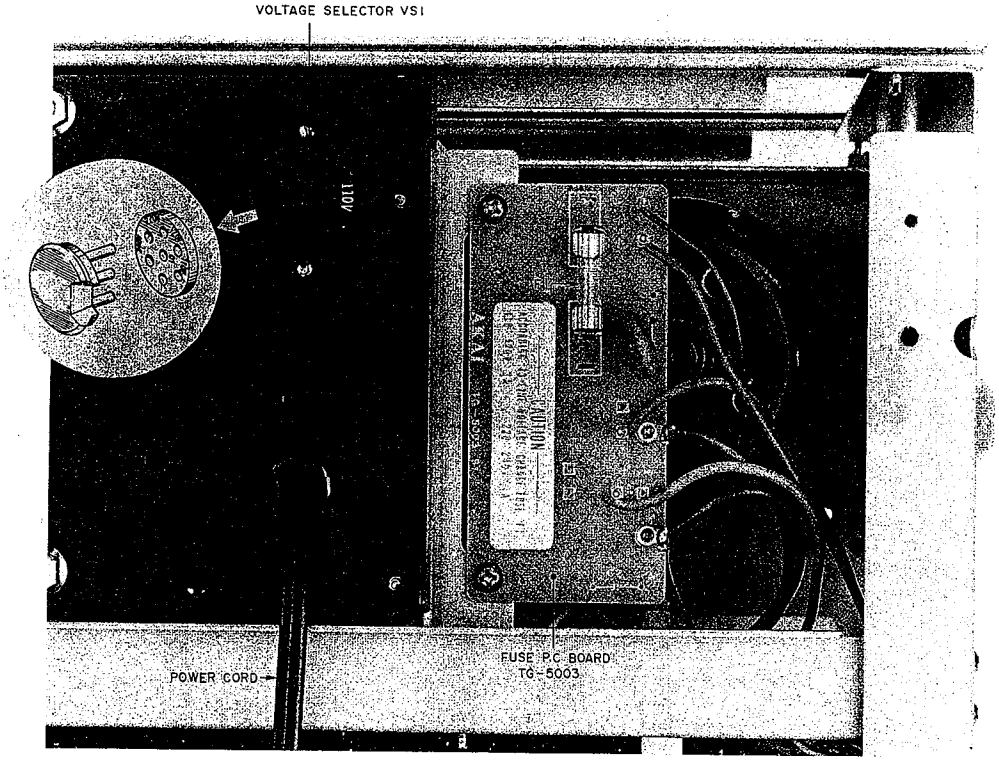
V. VOLTAGE AND CYCLE CONVERSION



(a) CEE, UK Model



(b) U/T Model

Fig. 4 Voltage Conversion

1. VOLTAGE CONVERSION (Refer to Fig. 4)

1) CSA, AAL Model (120V, 60 Hz)

Voltage can not be switched.

2) CEE, UK Model (220V/240V, 50 Hz)

A voltage selector switch is provided under the AC inlet on the back side of machine. Select the proper voltage by this switch according to the voltage to be used. Move the switch to the left side for 220V and to the right side for 240V.

3) U/T Model (110V/120V/220V/240V, 50/60 Hz)

Remove the back board and find out the voltage selector and Fuse P.C Board on the upper right portion of the machine. Change the position of voltage selector plugs so that the voltage to be used coincides with the voltage shown through the opening of voltage selector plug. The rating of fuse (F1) differs depending on the voltage to be use. Change the fuse according to the specified rating shown below.

110V/120V Area	250V 2A
220V/240V Area	250V 1A

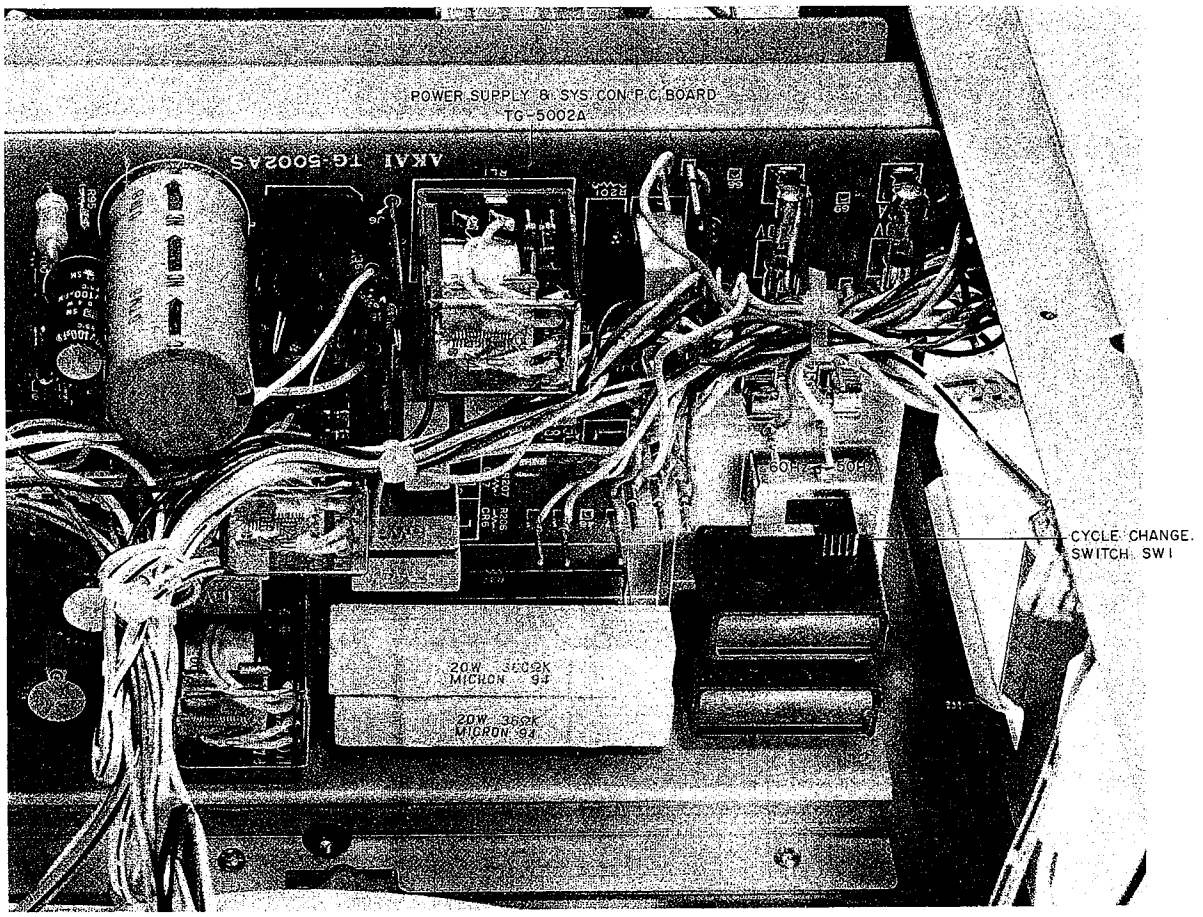


Fig. 5 Cycle Conversion (U/T Model Only)

2. CYCLE CONVERSION (Refer to Fig. 5)

Cycle conversion can be made only with U/T Model. Remove the back board and select the position of switch located in the recess at right portion of Power Supply & Sys. Con P.C Board in conformity with the frequency of power to be used.

Move the switch to the right for 50 Hz and to the left for the 60 Hz.

CAUTION: When selecting the voltage or cycle, make sure to turn off the power switch and disconnect the power cord.

VI. CIRCUIT OPERATING PRINCIPLES

1. CIRCUIT CONSTRUCTION OF IC1 M54410P

This logic IC has been developed for an operation key that will maintain a HIGH output level by even a momentary low level in the desired input terminal.

1) Block Diagram

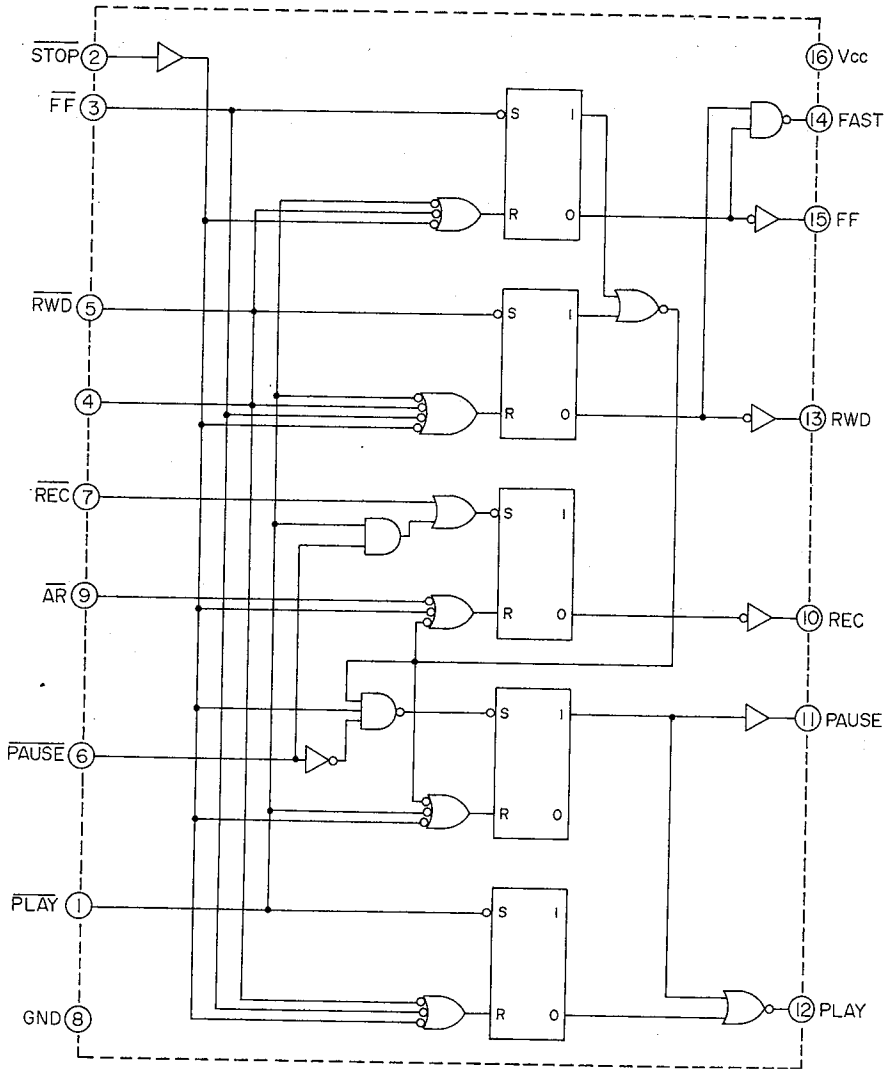

Fig. 6 M54410P

2) Terminals and their functions

	Terminal Name	Terminal Function
Operation input terminals	$\overline{\text{STOP}}$	Input terminal for stopping operation
	$\overline{\text{FF}}$	Input terminal for fast forward
	$\overline{\text{RWD}}$	Input terminal for rewind
	$\overline{\text{REC}}$	Input terminal for recording
	$\overline{\text{PAUSE}}$	Input terminal for pause
	$\overline{\text{PLAY}}$	Input terminal for playback
Control input terminal $\overline{\text{AR}}$		Input terminal for preventing recording
Output terminals	FAST	Terminal with "H" signal output during fast forward or rewind mode
	FF	Terminal with "H" signal output during fast forward mode
	RWD	Terminal with "H" signal output during rewind mode
	REC	Terminal with "H" signal output during REC/PLAY or REC/PAUSE mode
	PAUSE	Terminal with "H" signal output during pause mode
	PLAY	Terminal with "H" signal output during playback mode

Chart-1

3) Operation activated by each input

Input Signal	Output						Output Mode
	FAST	FF	RWD	REC	PAUSE	PLAY	
$\overline{\text{STOP}}$	L	L	L	L	L	L	STOP Mode
$\overline{\text{FF}}$	H	H	L	L	L	L	FF Mode
$\overline{\text{RWD}}$	H	L	H	L	L	L	RWD Mode
$\overline{\text{PLAY}}$	L	L	L	L	L	H	PLAY Mode
$\overline{\text{PAUSE}}$	L	L	L	L	H	L	PAUSE Mode
$\overline{\text{REC}}/\overline{\text{PLAY}}$	L	L	L	H	L	H	REC/PLAY Mode
$\overline{\text{REC}}/\overline{\text{PAUSE}}$	L	L	L	H	H	L	REC/PAUSE Mode

Chart-2

NOTES:
1. The input signal is activated by the fall of ⌐└┘.
2. The output is maintained until the next input signal.
3. $\overline{\text{AR}}$ is a control input terminal and the REC output is not "H" when $\overline{\text{AR}}$ = "L".
4. When $\overline{\text{AR}}$ = "L" signal is supplied during the REC output is "H", REC output becomes "L".
5. At the moment the power is on, all output will be "L" and the Stop mode will be effected.

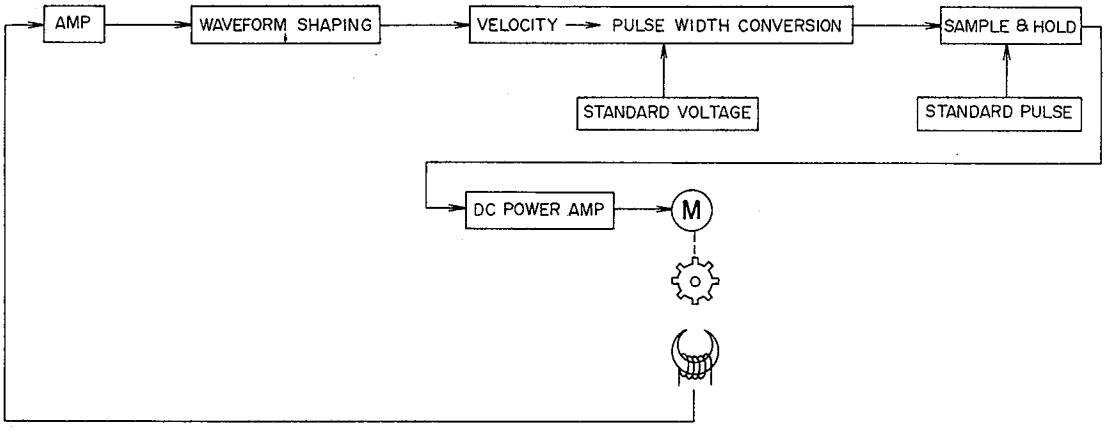

Fig. 7 Block Diagram

2. THE SAMPLE AND HOLD SYSTEM SERVO MOTOR (SCM-200) OPERATION

1) Servo signals generally created proportionately to the number of revolutions of the motor are shown either as frequency deviations or voltage deflections. The motor employed in GX-620 uses frequency deviation unaffected by time constants, etc., of the load circuit as input signal to the motor drive circuit through pulse width conversion.

This pulse width varies proportionately to the deviations in the number of motor rotations. The deviation is detected, converted to a voltage value, is held at that voltage until the next servo signal pulse, and then impressed into the motor drive circuit.

Meanwhile, since it requires a holding circuit and because 112 pulse are generated for each motor rotation, time constants of circuits coming before the Sample and Hold circuit can be greatly reduced compared to the conventional voltage deflection detection system.

For the reasons above, it features quick response to motor revolutions, minimum influence by temperature, and fewer chances of faulty mechanism. In addition, due to the inclusion of the servo voltage holding circuit, ripple content of the servo voltage holding circuit, ripple content of the servo voltage has been sharply reduced to result in a smooth and stable tape transport with a minimum of wow & flutter.

Fig. 9

2) **Explanation of the circuit operation**
(Refer to Figs. 8, 9)

The velocity signal obtained from the motor's frequency generator is shaped into a waveform in the period of "T" proportionate to the velocity as in (a) on collector TR6. This signal is differentiated and enters TR7 base. This makes TR7's collector output as in (c) and turns ON TR11 during the time of the negative pulse.

Meanwhile TR8 base is supplied with a waveform like (d) and when it reaches the threshold level, TR8 is turned on. A waveform (e) with pulse width "t_1" is obtained from the collector. During the time "T" that TR8 is ON, TR10 base electric potential decreases to turn ON.

Consequently, TR9 base electric potential increases and TR9 is also turned ON for the time "t_1"

When the period "T" varies with the velocity, the pulse width "t_1" varies according to TR8's threshold level. But when TR11 is on, it is constant due to the time constant. So that by using the period that TR11 is ON as the standard pulse, the pulse width "t_2" is constant regardless of the velocity.

(g) and (h) show the ON and OFF condition of TR11 and TR9.

When the electric charge that was charged to C16 is discharged during the time TR9 is ON "t_1", a signal voltage of "e" proportionate to the velocity can be obtained. Next, with "e" as its basis, C16 is charged during the limited time of the standard pulse width "t_2", and by the charging voltage "e" the charging is stopped. The voltage is then held until the next standard pulse.

This voltage "e" is supplied to the TR12 base and a servo signal "E" is obtained. This servo signal "E" controls TR13 and drives the motor. As shown above, since "t_1" and "t_2" are small, servo signal ripples are made small and a near direct current servo signal is obtained.

In addition, the time constants of the smoothing circuit can also be made small that phase lag factor can be minimized.

VII. MECHANISM ADJUSTMENT

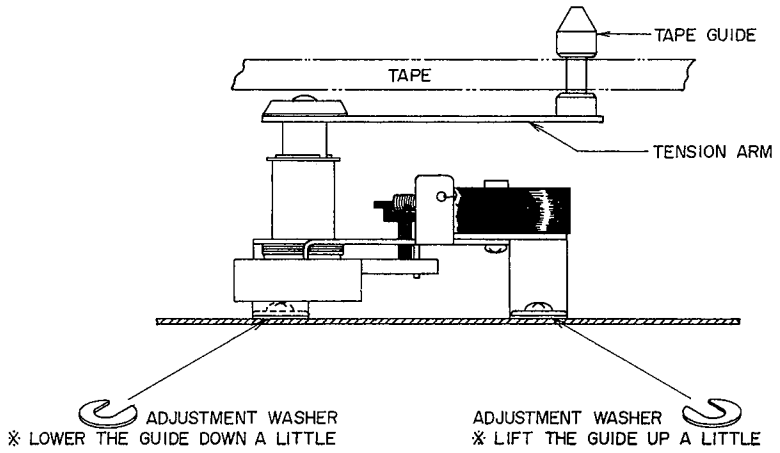

Fig. 10

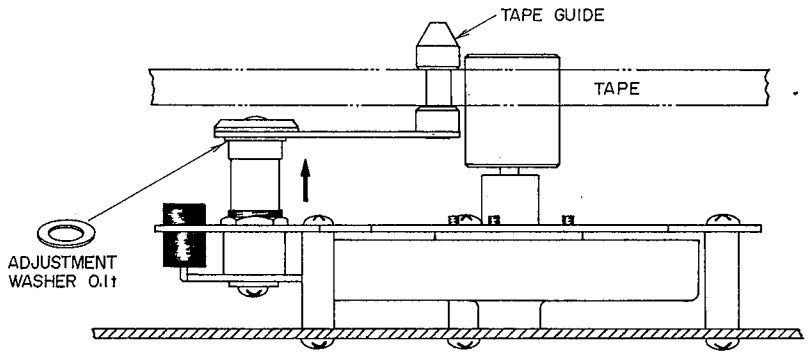

Fig. 11

1. TAPE GUIDE HEIGHT ADJUSTMENT

(Refer to Figs. 10, 11)

Adjust tape guide height so that the tape does not curl between the tape guide and guides on head base. As left and right tape guide height adjustment methods are different, be sure to refer to Figs. 10 and 11.

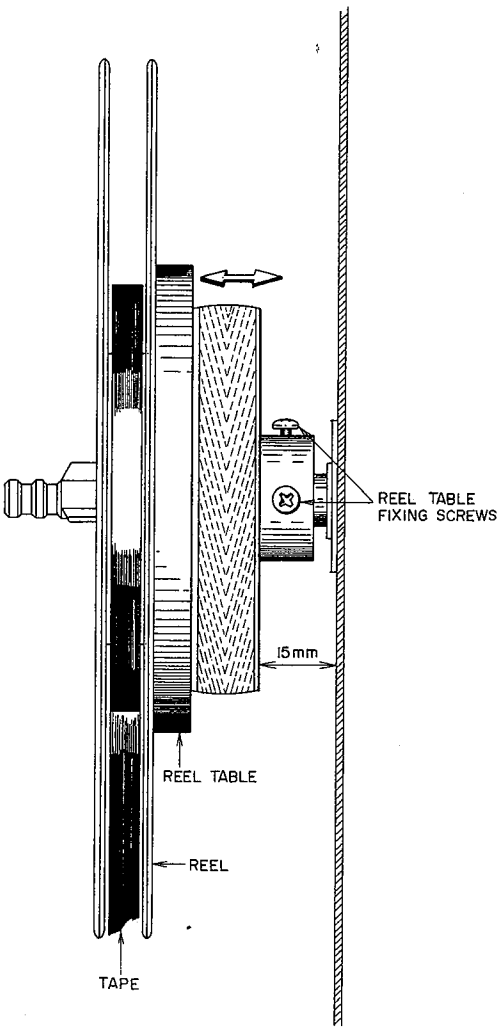

Fig. 12

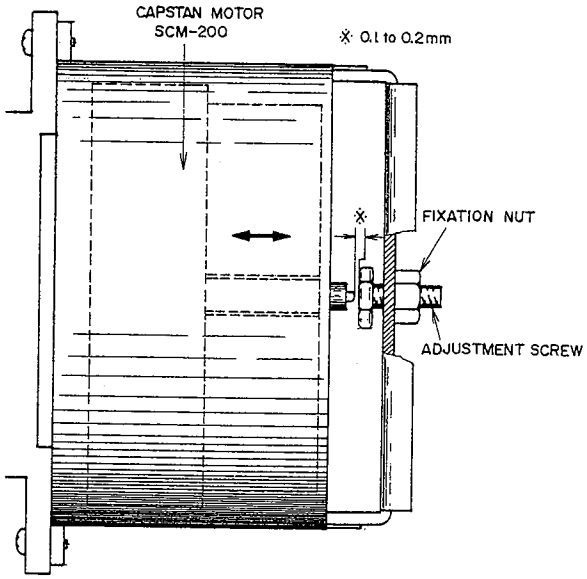

Fig. 13

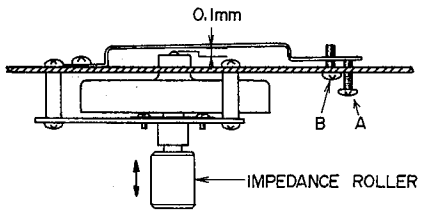

Fig. 14

2. REEL TABLE HEIGHT ADJUSTMENT (Refer to Fig. 12)

1) Temporarily screw in the fixing screws leaving a gap of 15 mm between the reel table and the chassis board.
2) Run the tape and adjust the height of the reel table so that the tape is taken up in the center of the reel. Tighten fixing screws. Adjust the height of the right reel table at fast forward, of the left reel table at rewind.

3. CAPSTAN SHAFT LOOSE PLAY ADJUSTMENT (Refer to Fig. 13)

Adjust by turning Adjustment Screw to obtain a 0.1 to 0.2 mm degree of loose play when the capstan shaft is moved as indicated by the arrow mark. Tighten fixation nut to maintain optimum adjusted condition.

4. IMPEDANCE ROLLER LOOSE PLAY ADJUSTMENT (Refer to Fig. 14)

Adjust Screws A and B so that impedance roller loose play is 0.1 mm. Confirm that the screws are tight following this adjustment.

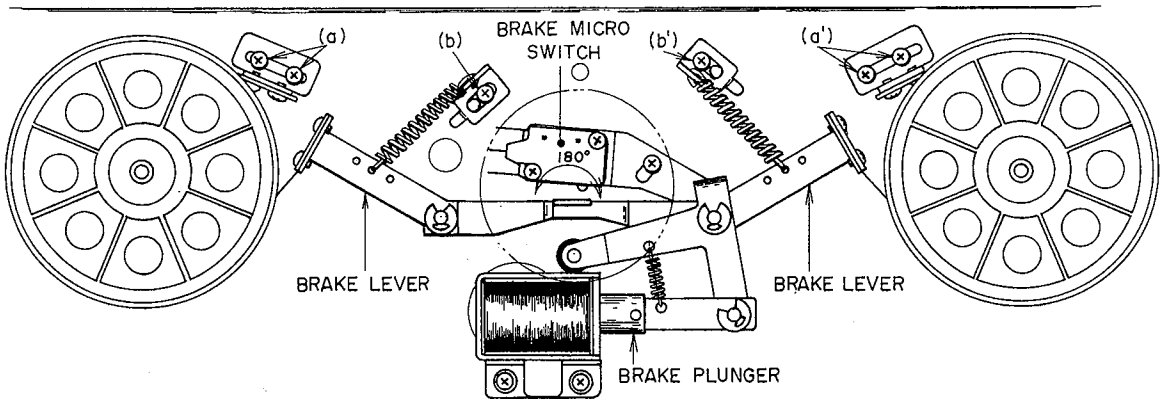

Fig. 15

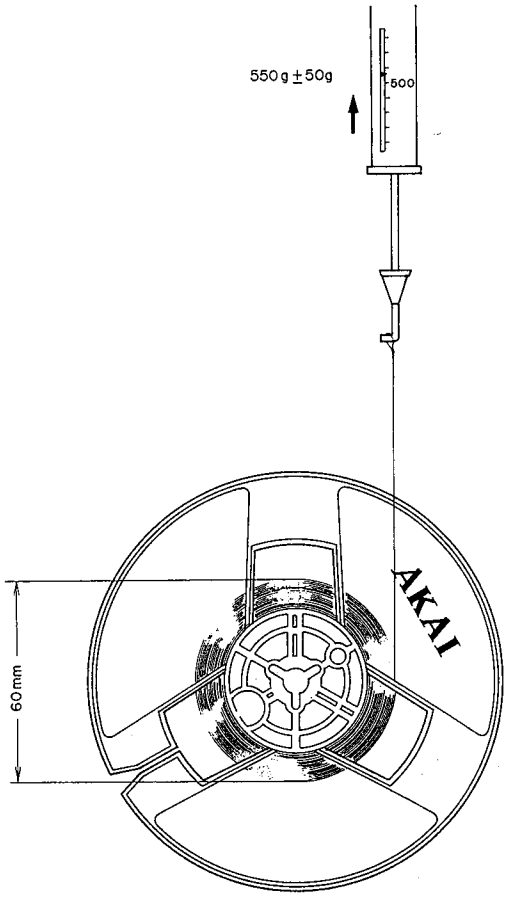

Fig. 16

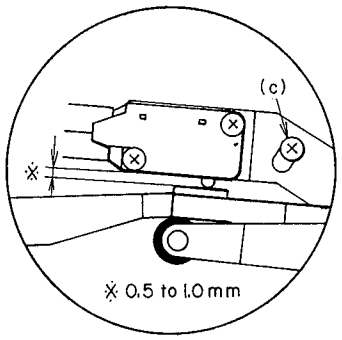

Fig. 17

5. BRAKE BAND POSITION ADJUSTMENT AND BRAKE TENSION ADJUSTMENT (Refer to Figs. 15 to 17)

1) Adjust the brake lever to 180° position by loosening the screws (a) and (a').
2) Work the brake plunger to check that the brake band is not slanted.
3) Adjust the position of the part with screws (b) and (b') to obtain a brake tension of 550 ± 50 g on both brakes at stop mode.
   (Use a 1,000 g spring gauge for a reel with 60 mm diameter of tape) In case the specified brake tension cannot be obtained, connect the springs to the other holes on the brake lever and adjust.
4) By working the brake plunger with a finger, adjust the position of the microswitch screw (c) so that the gap between the brake lever and the microswitch body is 0.5 to 1.0 mm.

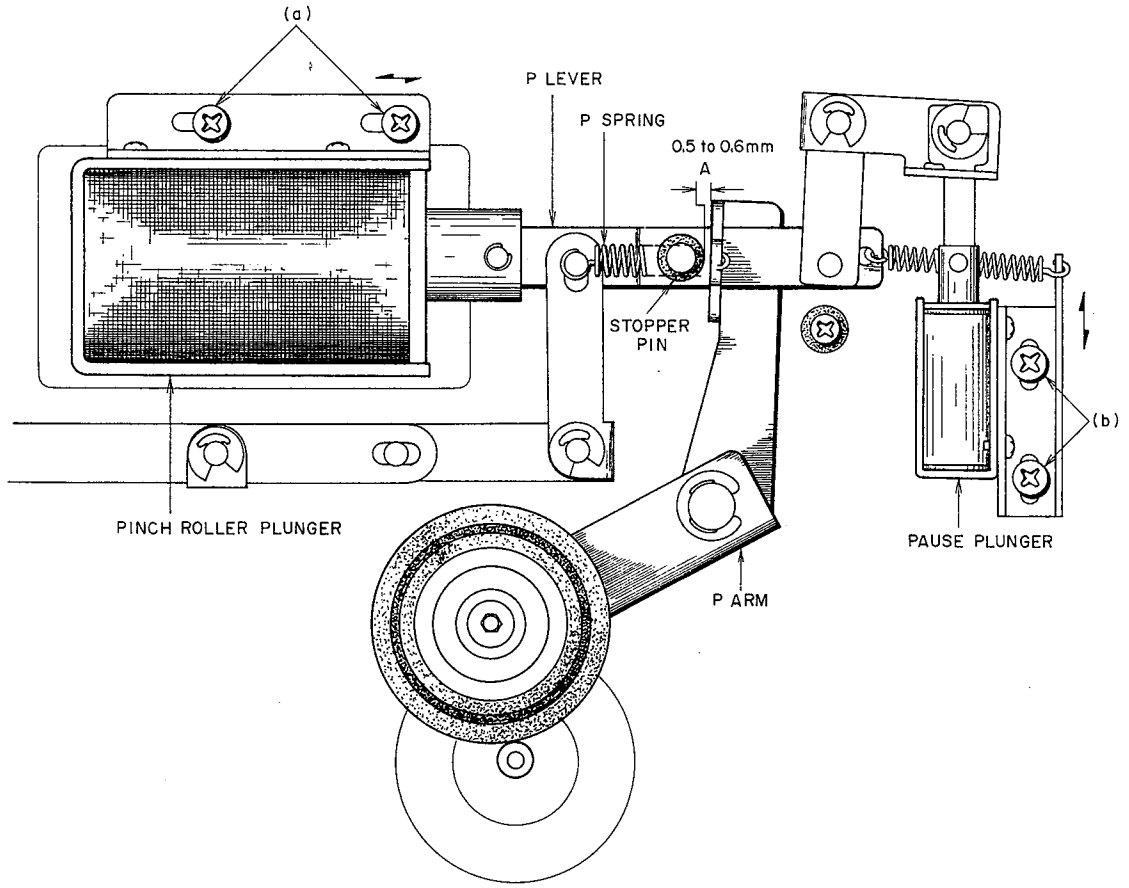

Fig. 18

6. PINCH ROLLER PLUNGER INSTALLATION POSITION AND PINCH ROLLER PRESSURE ADJUSTMENT (Refer to Fig. 18)

1) While in the play mode, adjust the position of pinch roller plunger by means of screw (a) until the gap (Fig. 18A) between P arm and the rubber part of stopper pin becomes 0.5 to 0.6 mm.
2) Connect a 2 kg spring gauge to the pinch roller fixing screw. Pull up the pinch roller and then let it slowly move back. Check that the spring gauge reads 1.2 kg ± 100 g at the moment the pinch roller touches the capstan and starts rolling. If the specified pressure cannot be obtained, adjust gap A by positioning the pinch roller plunger or replace the P spring, so as to attain the specified pressure.

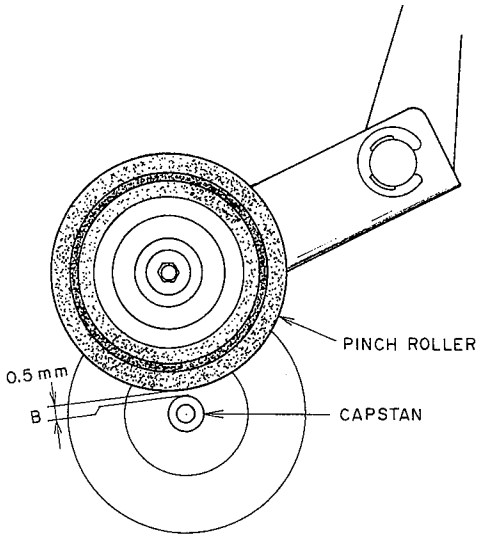

Fig. 19

7. PAUSE PLUNGER POSITION ADJUSTMENT (Refer to Figs. 18, 19)

At the pause mode, the gap between the capstan and the pinch roller should be 0.5 mm. Adjust the pause plunger position with screws (b).

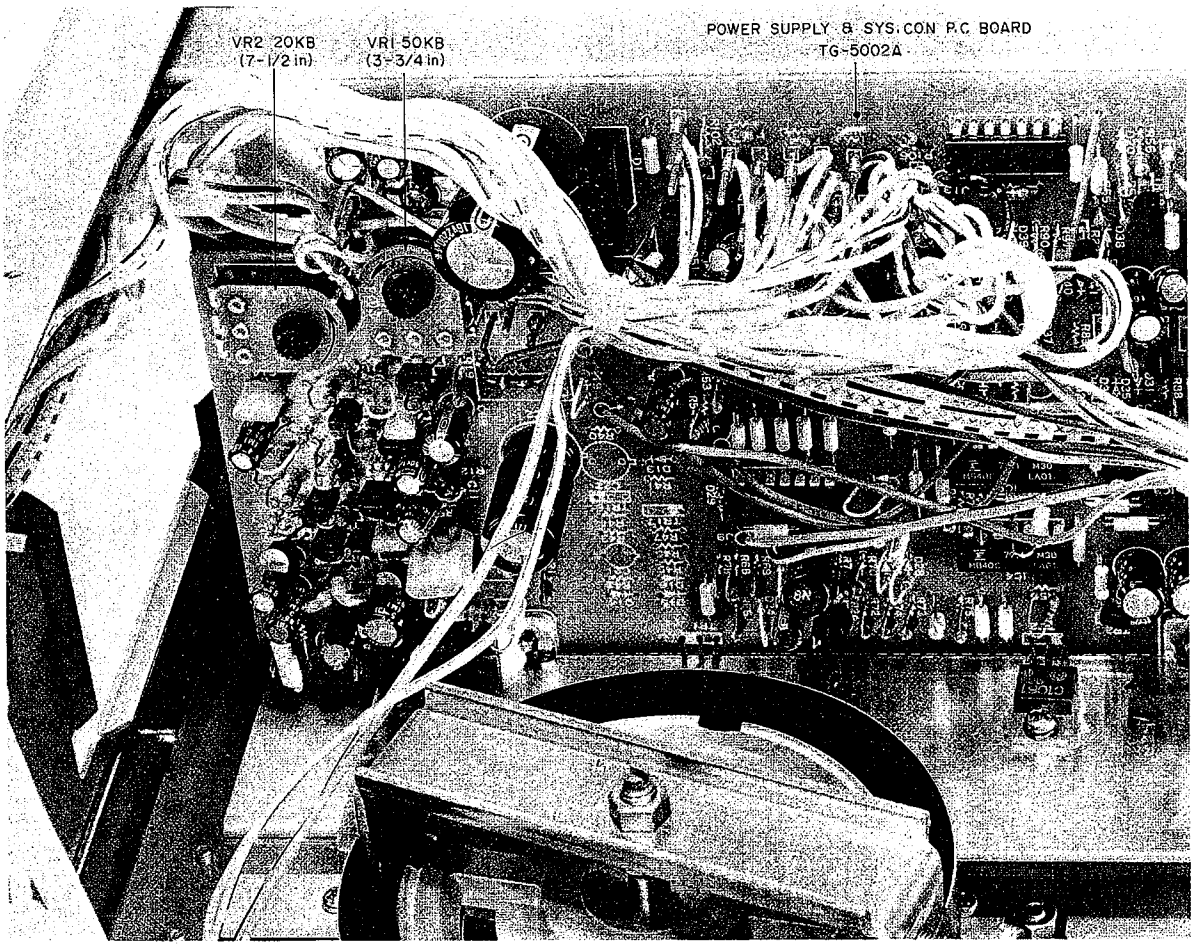

Fig. 20

8. TAPE SPEED ADJUSTMENT

(Refer to Fig. 20)

Set the Tape Speed Switch to 7-1/2 ips and playback the 1,000 Hz, 7-1/2 Test tape. Connect a frequency counter to LINE OUT and adjust VR2 20 kB until the counter reads 1,000 Hz ± 0.5%.

Next, set the Tape Speed Switch to 3-3/4 ips and adjust VR1 50 kB until the frequency counter reads 500 Hz ± 0.5%.

VIII. HEAD ADJUSTMENT

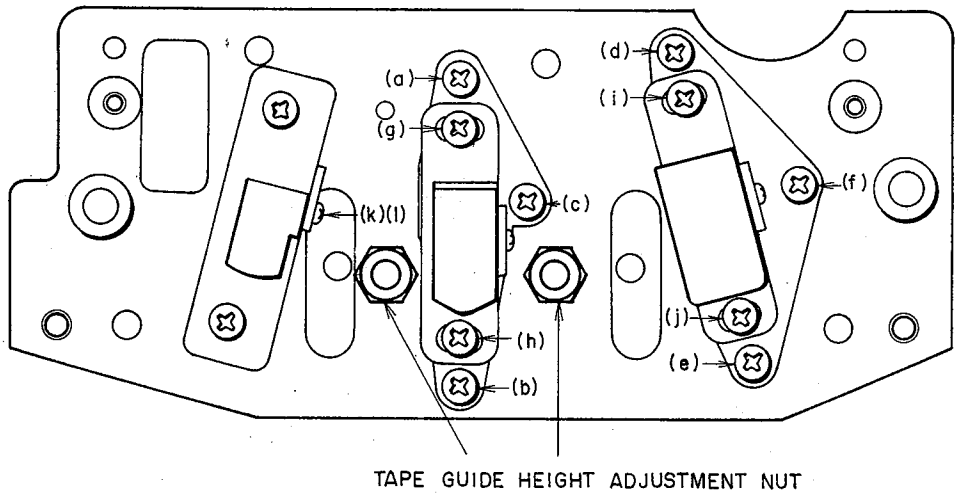

Fig. 21

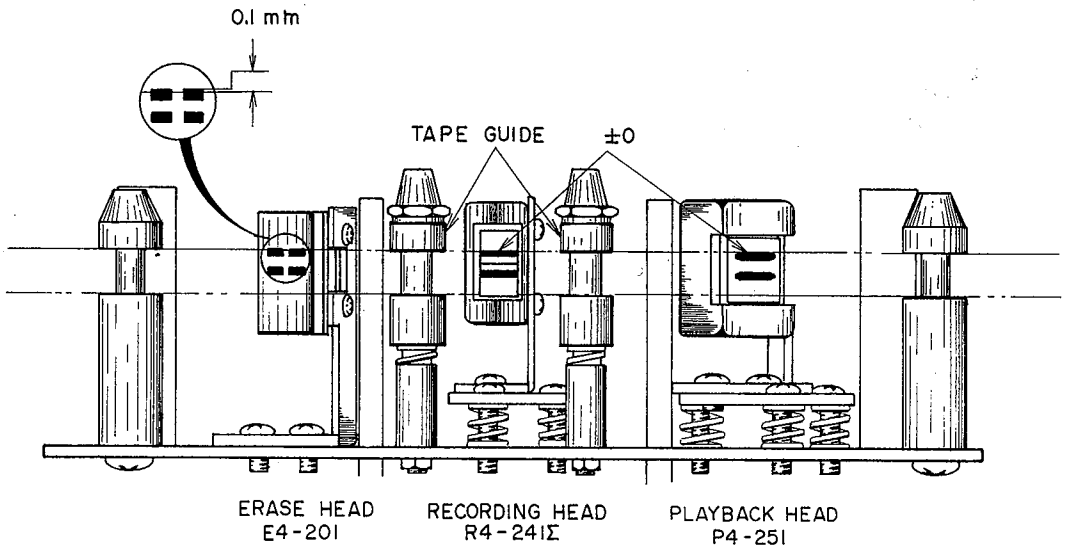

Fig. 22

Step	Adjustment Item	Test Tape Supply Signal	Mode	Adjustment Point	Remarks
1	Tape Guide Height	Optional	Play	Tape Guide Height Adjustment Nut	Adjust so that tape travels smoothly and does not twist.
2	Erase Head Height	Optional	Play	(k) (l)	Upper edge of Left Ch. head core is 0.1 mm higher than upper edge of tape.
3	Recording Head Height	Optional	Play	(a) (b) (c)	Upper edges of Left Ch. head core and tape are the same height. (Refer to NOTE 6.)
4	Playback Head Height	Optional	Play	(d) (e) (f)	Upper edges of Left Ch. head core and tape are the same height. (Refer to NOTE 6.)
5	Playback Head Azimuth Alignment	8,000 Hz 3-3/4 ips Test Tape	Play	(f)	Maximum output, both channels.
6	Playback Head Angle Alignment	8,000 Hz 3-3/4 ips Test Tape	Play	(i) (j)	Adjust head gap surface so that there is no change in output level when tension is applied to the supply reel side.
7	Recording Head Azimuth Alignment	Scotch #176 Tape 15,000 Hz −20 dBm	REC	(c)	Maximum output, both channels.
8	Recording Head Angle Alignment	Scotch #176 Tape 15,000 Hz −20 dBm	REC	(g) (h)	Adjust head gap surface so that there is no change in output level when tension is applied to the supply reel side.

Chart-3

NOTES:
1. As perfect head adjustments are vital to tape deck performance, be sure that these adjustments are carried out properly.
2. Be careful not to use a magnetized driver or other magnetized tools in the vicinity of the heads.
3. Use only new tape as level variation is likely to occur when using old tape.
4. Demagnetize heads with head demagnetizer before and after head adjustment.
5. Set tape speed to 7-1/2 ips.
6. Simultaneously adjust the front and back tilts of head until uniform contact is ensured between the tape and the surface of head.

IX. AMPLIFIER ADJUSTMENT

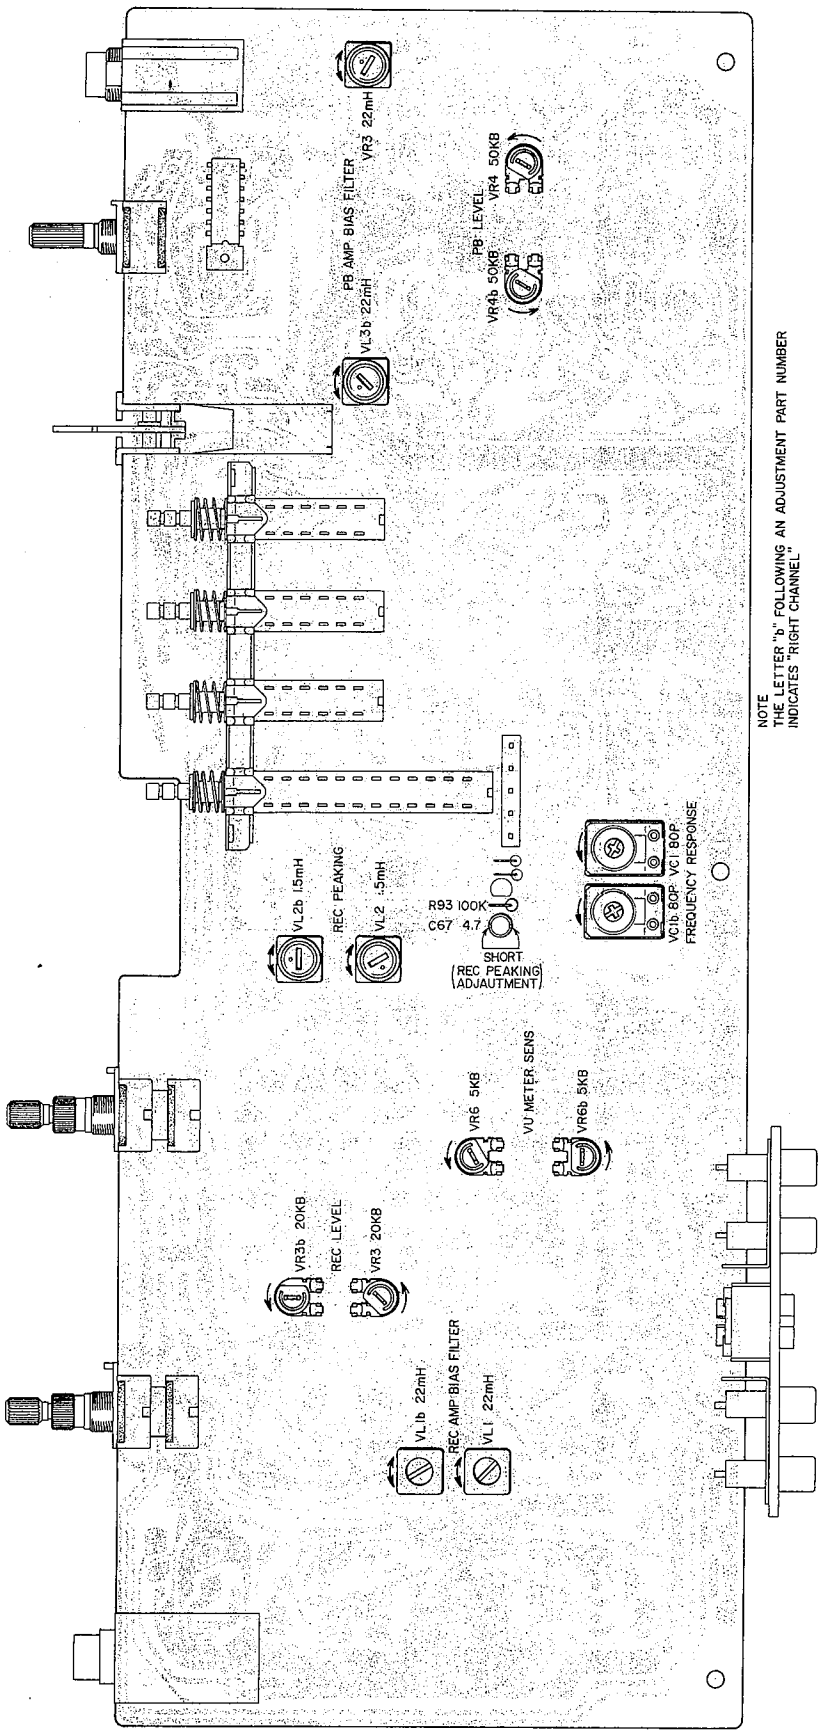

Fig. 23 Pre Amp P.C Board TG-5001A

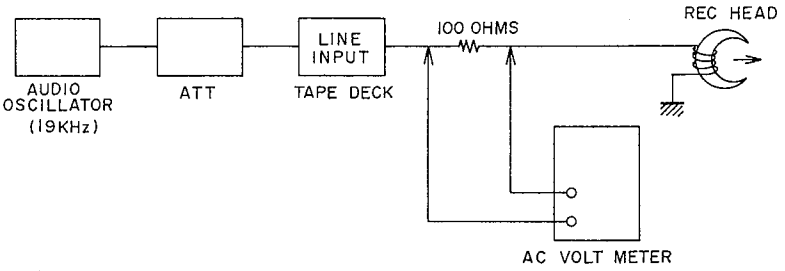

Fig. 24 Rec Peaking Adjustment Instrument Connection

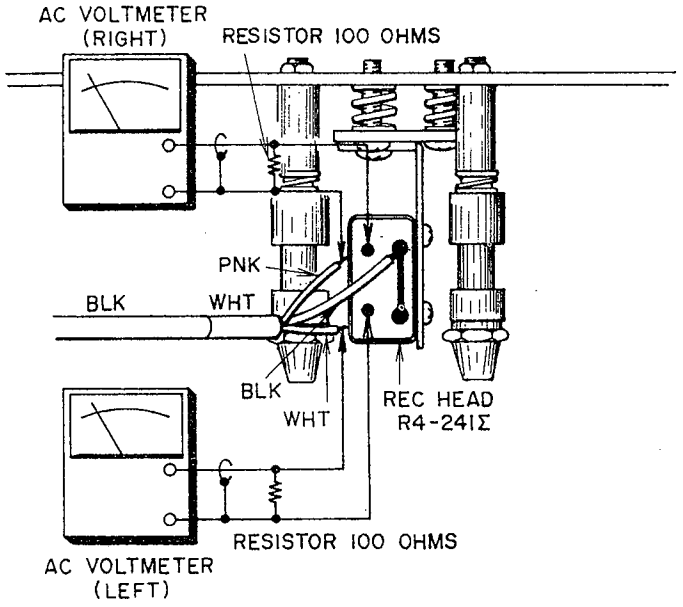

Fig. 25 Rec Peaking Adjustment

Step	Adjustment Item	Test Tape Supply Signal	Mode	Adjustment Point	Result	Remarks
1	Playback Level	700 Hz 7-1/2 ips 0VU Test Tape	Play	VR 4 50 kB	0 ± 0.5 dBm (0.775V)	
2	VU Meter Sensitivity	700 Hz 7-1/2 ips 0VU Test Tape	Play	5 kB	0VU indication	
3	REC Peaking	19 kHz from an oscillator	REC	VL 2 1.5 mH	Maximum AC Voltmeter indication	Tape Speed 3-3/4 ips. Refer to NOTE 4, 5, 7 and Figs. 18, 19, 20.
4	Recording Level	Scotch #176 Tape 1,000 Hz 0 dBm Recording	REC	VR 3 20 kB	0 ± 0.5 dBm (0.775V)	
5	Frequency Response (3-3/4 ips)	Scotch #176 Tape 1.5 kHz, 15 kHz −20dBm Recording	REC	TC 1 80 P	1.5 kHz 15 kHz flat	Tape Speed 3-3/4 ips. Recheck Recording Level.
6	Distortion Confirmation	Scotch #176 Tape 1,000 Hz 0 dBm Recording	REC		Less than 0.5%	See NOTE 6.
7	PB Amp Bias Filter	100 kHz from an oscillator	REC	VL 3 22 mH	Minimum AC Voltmeter indication	Set Monitor Switch to "TAPE". See NOTE 7, 8.
8	REC Amp Bias Filter	100 kHz from an oscillator	REC	VL 1 22 mH	Minimum AC Voltmeter indication	Set Monitor Switch to "SOURCE". See NOTE 7, 8.

Chart-4

NOTES:
1. Output Level Control should be at maximum.
2. Except for Step 3 and 5, set Tape Speed to 7-1/2 ips.
3. Set Tape Selector Switch to Low Noise position.
4. Stop recording bias oscillator while making Rec Peaking Adjustment. (Refer to Fig. 23)
5. When 19 kHz indicates the peak, check and ensure that the AC voltmeter shows 16 dB of increase when 15 kHz of input is fed rather than when 1 kHz is fed.
6. If it does not comply with the specifications, repeat Steps 4 and 5, and re-adjust.
7. Unless the core is moved intentionally this adjustment is not necessary.
8. Adjust the oscillator's frequency to give a frequency counter reading of 100 kHz.

X. DC RESISTANCE OF VARIOUS COILS

Part	Designation	DC Resistance
Main Motor	SCM-200	Between BLU-RED : 110 ohms Between YLW-BRN : 170 ohms Pick-up Coil : 665 ohms

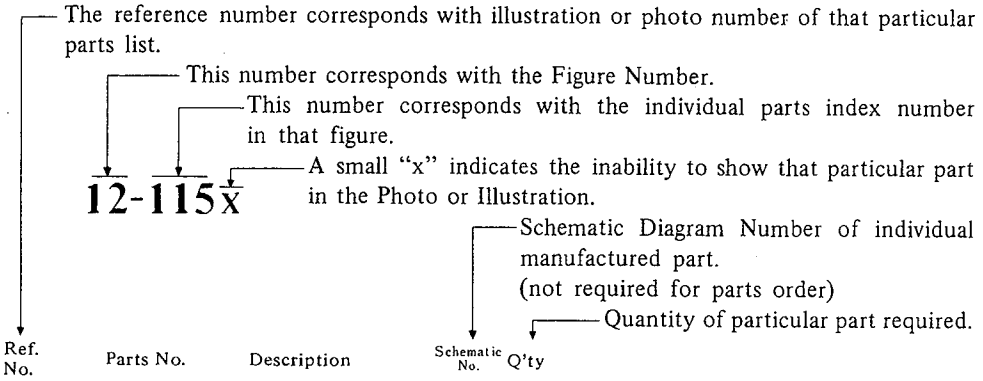
12. FINAL ASSEMBLY BLOCK 52

INDEX 54

Resistor and Capacitor which is not listed in this parts list, please refer to COMMON LIST FOR SERVICE PARTS.

HOW TO USE THIS PARTS LIST

1. This parts list is compiled by various individual blocks based on assembly process.
2. When ordering parts, please describe parts number, serial number, and model number in detail.
3. How to read List



The reference number corresponds with illustration or photo number of that particular parts list.
This number corresponds with the Figure Number.
This number corresponds with the individual parts index number in that figure.
A small "x" indicates the inability to show that particular part in the Photo or Illustration.
12-115x
Schematic Diagram Number of individual manufactured part.
(not required for parts order)
Quantity of particular part required.

Ref. No.	Parts No.	Description	Schematic No.	Q'ty
		FLYWHEEL BLOCK #13		
12-115x	800425	Flywheel Block Assy. Comp.	RDG #13	1
12-116	244506	Flywheel Only	RD-233	1
12-117x	244754	Felt, Flywheel	RD-275	1
12-118	251324	Main Metal Case	RD-236	1
12-119	253080	Main Metal	RD-237	1

4. The symbol numbers shown on the P.C. Board list can be matched with the Composite Views of Components of the Schematic Diagram or Service Manual.
5. Please utilize separate "Common List for Service Parts" for Resistor Parts orders.
6. The shape of the parts and parts name, etc. can be confirmed by comparing them with the parts shown on the Electrical Parts Table of P.C. Board.
7. Both the kind of part and installation position can be determined by the Parts Number. To determine where a parts number is listed, utilize Parts Index at end of Parts List.
   It is necessary first of all to find the Parts Number. This can be accomplished by using the Reference Number listed at right of parts number in the Parts Index. (meaning of ref. no. outlined in Item 3 above).
8. Utilize separate "Price List for Parts" to determine unit price. The most simple method of finding parts Price is to utilize the reference number.

CAUTION:
1. When placing an order for parts, be sure to list the parts no. model no., and description. There are instances in which if any of this information is omitted, parts cannot be shipped or the wrong parts will be delivered.
2. Please be careful not to make a mistake in the parts no. If the parts no. is in error, a part different from the one ordered may be delivered.
3. Because parts number and parts unit supply in the Preliminary Service Manual (Basic Parts List) may be partially changed, please use this parts list for all future reference.

WARNING: ⚠ INDICATES SAFETY CRITICAL COMPONENTS. FOR CONTINUED SAFETY, REPLACE SAFETY CRITICAL COMPONENTS ONLY WITH MANUFACTURER'S RECOMMENDED PARTS.

AVERTISSEMENT: ⚠ IL INDIQU LES COMPOSANTS CRITIQUES DE SURETE. POUR MAINTENIR LE DEGRE DE SECURITE DE L'APPAREIL NE REMPLACER LES COMPOSANTS DONT LE FONCTIONNEMENT EST CRITIQUE POUR LA SECURITE QUE PAR DES PIECES RECOMMANDEES PAR LE FABRICANT.

AC INLET SYSTEM

This model is equipped with an AC INLET SYSTEM. Please refer to the AC INLET SYSTEM CHART below for the specific type. By the AC INLET SYSTEM, AC (mains) cord can be connected to and disconnected from the model because the model is provided with socket exclusively for AC (mains) cord on its main body.
Please note, however, that certain models are not equipped with this system and has a built-in AC (mains) cord as before.

AC INLET SYSTEM CHART

CLASS I

CLASS II

▣ This mark indicating double insulation will be attached to machine's rear panel
